

BioSense — Wearable Data Capability Matrix

What health data each supported wearable delivers through the Terra integration.

Generated 13 July 2026 · Data pulled via Terra API

■ Yes — provided ■ Ltd — conditional (needs specific hardware, subscription, or data source) ■ No — not provided ■ Verified from live data ■ From Terra's documented capability

Metric	Oura	Whoop	Garmin	Samsung	Fitbit	Strava	Google	Peloton
HEART & RECOVERY								
Resting heart rate	Yes	Yes	Yes	Yes	Yes	No	Ltd	No
Continuous / average HR	Yes	Yes	Yes	Yes	Yes	No	Ltd	No
Heart rate variability (HRV)	Yes	Yes	Yes	Ltd	Yes	No	No	No
Recovery / readiness score	Yes	Yes	Ltd	No	Ltd	No	No	No
Strain / exertion score	No	Yes	Ltd	No	No	No	No	No
Stress level	Ltd	No	Yes	Yes	Ltd	No	No	No
Blood oxygen (SpO ₂)	Yes	Ltd	Ltd	Yes	Yes	No	No	No
SLEEP								
Sleep duration	Yes	Yes	Yes	Yes	Yes	No	Ltd	No
Sleep stages (deep/light/REM)	Yes	Yes	Yes	Yes	Yes	No	Ltd	No
Sleep efficiency / score	Yes	Yes	Yes	Yes	Yes	No	No	No
Respiration rate	Yes	Yes	Yes	Yes	Yes	No	No	No
Skin / body temperature	Yes	Yes	No	No	Yes	No	No	No
ACTIVITY								
Steps	Yes	No	Yes	Yes	Yes	No	Yes	No
Distance	Yes	No	Yes	Yes	Yes	Yes	Yes	No
Active minutes / duration	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Calories burned	Yes	Yes	Yes	Yes	Yes	Ltd	Yes	Yes

Metric	Oura	Whoop	Garmin	Samsung	Fitbit	Strava	Google	Peloton
VO ₂ max / cardio fitness	No	No	Yes	Yes	Ltd	No	No	No
WORKOUTS								
Workout sessions (type/duration)	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Workout heart rate	Yes	Yes	Yes	Yes	Yes	Yes	Ltd	Yes
Workout calories	Yes	Yes	Yes	Yes	Yes	Ltd	Yes	Yes
BODY								
Weight / BMI / body fat	No	No	Ltd	Ltd	Ltd	No	Ltd	No

Suggested display tiers

Tier 1 — Universal (safe for every user): Sleep duration, Sleep HRV, Resting HR, Steps, Active minutes, Calories. Provided by nearly all wearables → main dashboard tiles + health-score inputs.

Tier 2 — Common (show when present): Sleep stages, Respiration, Distance, Stress, SpO₂, VO₂ max. Available on most watches/rings but not universally.

Tier 3 — Signature (device-specific highlights): Whoop Recovery & Strain, Oura Readiness & Temperature, Garmin/Samsung Stress & VO₂ max. Surface as a per-device highlight or normalise into BioSense's own readiness model.

Per-device notes

Oura — Ring. Best-in-class sleep + readiness + body temperature. No VO₂ max; no body-composition (no scale).

Garmin — Broadest all-rounder: sleep, HR, stress, VO₂ max, GPS distance, workouts. No Whoop-style recovery/strain. Weight only with Index scale.

Fitbit — Full stack capable (sleep, HRV, SpO₂, stress, temp). Some scores (Readiness, Stress, Cardio) need Fitbit Premium. *Test account currently syncing steps/calories only — needs overnight wear + scopes.*

Google (Health/Fit) — Aggregator: quality depends entirely on the underlying phone/watch. Reliable for steps/distance/activity; sleep & HR vary by source. *Documented — not yet verified live.*

Whoop — Band. Signature Recovery % + Strain, rich sleep & HRV. Does **not** track steps or distance.

Samsung Health — Comparable to Garmin (sleep, stress, SpO₂, VO₂ max). HRV is limited/conditional. *Documented — not yet verified live.*

Strava — Workout log only (type, duration, distance, workout HR). No sleep, resting HR, or body data.

Peloton — Workout sessions only (type, duration, HR, calories, output). No daily, sleep or body data. *Documented — not yet verified live.*

Verified providers (Oura, Whoop, Garmin, Fitbit, Strava) reflect fields observed in live Terra payloads on 13 Jul 2026. Samsung, Google and Peloton reflect Terra's documented data models and typical device capability; confirm on first live connection. "Ltd" means the field is only present with specific hardware (e.g. a smart scale), a paid tier, or a compatible data source. BioSense · Confidential.
